

# ETHOS BRIGHT EYES™

EYE DROPS FOR PETS  
2 X 5ML BOTTLES

## Ingredients

- N-Acetyl-Carnosine (NAC) – 1.0% (a super-antioxidant)
- Glycerine (lubricant) – 1.0%
- Hydroxypropylmethylcellulose sodium (lubricant) – 0.15%
- Sterile water (ophthalmic grade isotonic solution, pH 6.3 to 6.5)
- Buffered with boric acid, citric acid, potassium bicarbonate and, as a preservative, purified benzyl alcohol

## Other information

- Bright Eyes™ drops for pets are 100% hypo-allergenic
- Bright Eyes™ drops for pets are 100% free from animal ingredients
- Bright Eyes™ for pets are 100% safe and suitable for pets and most animals

## Warnings

To avoid contamination, do not touch the tip of the bottle. Replace the cap immediately after use. Only open one bottle at a time. Do not allow other people to use your eye drops. Ideally, bottles should be stored in a refrigerator. If this is not possible, they should be stored in a cool dark place. Do not use if the seal is broken or if the solution changes colour or becomes cloudy. Once opened, discard the bottle and any remaining contents after 30 days. If your pet's eye tissue becomes inflamed, red or irritated after applying the drops, or if the condition worsens or persists for more than 72 hours, discontinue the use of the drops immediately and consult a veterinarian. As with all medicines, keep out of reach of children. Use before the expiration date shown on the bottle. **DO NOT FREEZE.**

## Recommended usage:

One 5ml bottle contains approximately 100 drops. The recommended course of treatment is to use one box of 2 x 5ml bottles a week, for a period of six weeks (6 boxes). 80% of people report seeing significant improvements in their pet's eyes within this time-frame. Those with pets with more severe conditions may need to continue the treatment for longer..

- Apply Bright Eyes Drops™ hourly; 8, 9 or 10 times a day to the affected eye(s)
- Apply one or two drops per eye upon each application
- Hold your pet's eye open and instil the drops onto the centre of the eyeball, then hold the eye closed and prevent their head from shaking for approximately one minute. Repeat with the other eye.

See overleaf for instructions on how to open the eye drops bottles...

## Indications

For the natural treatment of cataracts, glaucoma, macular degeneration, vitreous opacities & lesions, ocular inflammation, eye irritation, dry eyes, corneal disorders, retinal disease and atrophy (degeneration).

We appreciate with pets that it's not always possible to apply the drops hourly and the treatment still works applying one or two drops into each eye two or three times a day but will take proportionally longer, i.e. if applying the drops twice a day one box will last approximately four weeks so the full course will then take 6 months to complete.

Also, cataracts in humans is often quite slow to change but in animals it can come and go almost overnight in some cases so, rather than seeing a slow and gradual ongoing improvement with animals you can often not see any changes and then you suddenly see a dramatic improvement.

**How to open a bottle** (NB The collar is shown below in red for ease of identification but it is actually white in colour)

- 

**1** Remove the plastic cap. Holding the bottle upright, twist the cap counter-clockwise.
- 

**2** Carefully lift off the cap.
- 

**3** Remove the plastic collar below the cap. Pull the collar straight up and over the tip of the bottle, keeping it level and square with the bottle.
- 

**4** Discard the plastic collar.
- 

**5** To puncture the top of the bottle; simply replace the cap without the collar on the bottle and, as you tighten it down, the sharp point inside the cap will pierce it. Be sure to tighten the cap using just enough force to pierce the tip of the bottle as over-tightening it will make the hole too large causing the drops to be released too quickly.
- 

**6** **TO DISPENSE A DROP**  
Remove the plastic cap and squeeze the bottle gently until a drop is dispensed.
- 

**7** Replace the cap as soon as possible after use. Holding the bottle upright, twist the cap clockwise. **DO NOT OVER-TIGHTEN.**
- 

**8** Keep out of direct sunlight.
- 

**9** Keep as cool as possible but do not freeze.
